### WolfVision Introduces vSolution Cynap Core™

KLAUS, AUSTRIA – January 23, 2018. WolfVision, the manufacturer of presentation and collaboration technology solutions, announces an important extension to its Cynap system portfolio. The new vSolution Cynap Core collaboration system will be introduced at this year's ISE 2018 show. Cynap Core provides the core essential features and functionality for effective wireless presentation and collaboration. It is designed as a powerful, compact, flexible, and easy to use system, suitable for classrooms, meeting rooms, and huddle spaces everywhere.

#### **App-free, dongle-free BYOD**

Cynap Core features comprehensive 'bring your own device' (BYOD) capability, with wireless screen sharing for all iOS, Android, Windows, and Mac devices. Connection is quick and easy, and support for AirPlay, Chromecast, and Miracast mirroring protocols means that no software, apps or dongles are needed when sharing content on-screen from smartphones, tablets or laptops.

#### **All files, all locations, all devices**

Additional key system features include a built-in media player which enables all types of files from cloud, network drives or other connected sources to be displayed on-screen, a digital whiteboard which is available for making notes, and an annotation feature that enables users to draw over any open window. This allows additional content to be created and captured spontaneously at any time.

#### **Active learning classrooms**

For active learning classrooms and collaboration spaces where multiple workstations are required, multiple Cynap Core systems can be integrated into network infrastructure, together with a vSolution MATRIX enabled Cynap system, to provide a truly scalable, high performance AV over IP collaborative working and learning environment.
